SANKET RAM

Full Stack Developer

Mumbai | +91 8104705753 | sanketram75@gmail.com | Github: Sanketram05

EDUCATION

University of Mumbai — Bachelor of Engineering (B.E.), Information Technology *2022 – 2026*
CGPA: 9.29

Higher Secondary Certificate (H.S.C.) — Maharashtra State Board *2020 – 2022*
65.33%

WORK EXPERIENCE

Full Stack Developer Intern — Kelconix Global Services *Dec 2024 – Jan 2025*
Hybrid, Mumbai

- Built a company website from scratch in React as part of a 5-person team; co-led performance optimization after identifying a 16-second Largest Contentful Paint (LCP).
- Diagnosed root causes using rollup-plugin-visualizer (oversized dependencies) and React Profiler (unnecessary re-renders); resolved with React.memo, React.lazy for heavy components and CDN-based image delivery.
- Eliminated client-side data-fetching waterfalls by replacing useEffect-based fetching with server functions, reducing LCP from 16s to 1.5s (~91% improvement).

Technologies: React, rollup-plugin-visualizer, React Profiler

PROJECTS

FanOut-Engine — Real-Time Football Match Tracker *June 2026 - July 2026*

- Built a full-stack real-time football tracking app with Next.js 15, Express.js, PostgreSQL, Drizzle ORM, and WebSockets; fetches live match data from the API-Football service and streams live commentary to connected clients.
- Implemented match-specific WebSocket subscriptions so clients only receive commentary for matches they're viewing, with automatic broadcasting of newly inserted events and duplicate-event prevention via atomic database operations.
- Handled external API constraints with rate-limit and request-timeout handling for automatic match/commentary synchronization, and secured the WebSocket server with Arcjet for bot/abuse protection.

Technologies: Next.js, React, TypeScript, Tailwind CSS, Shadcn UI, React Query, Node.js, Express.js, PostgreSQL, Drizzle ORM, WebSockets, Arcjet.

Cpp ProtocolComm *Feb 2026 – Mar 2026*

- Built a Built a real-time ChatRoom application from scratch in C++ using Boost Asio, with a custom message protocol for reliable communication and multi-threading for concurrent client handling.
- Implemented a client-server model with a Room class managing client Sessions, broadcasting messages to all participants except the sender via a non-blocking message queue.
- Handled external API constraints with rate-limit and request-timeout handling for automatic match/commentary synchronization, and secured the WebSocket server with Arcjet for bot/abuse protection.

Technologies: C++, Boost Asio.

ResumeForge AI *Nov 2025 – Dec 2025*

- Built a serverless application that evaluates resume alignment with job descriptions, providing an ATS score and actionable feedback on content, structure, and skills.
- Powered by the Puter.js API utilizing Claude 3.7 Sonnet with custom prompt engineering for JSON parsing and multi-category ATS scoring logic — built with ReactJS, Tailwind CSS, TypeScript, and Zustand.

Technologies: ReactJS, Tailwind CSS, TypeScript, Zustand

SKILLS

- Databases: MongoDB, MySQL, PostgreSQL
- Frameworks & Libraries: React, Next.js, Node.js, Express
- Programming Languages: C++, TypeScript, JavaScript
- Concepts: Data Structures & Algorithms, Competitive Programming, REST APIs, Authentication & Authorization
- Tools & Platforms: Git, GitHub, Visual Studio Code, Postman, Vercel

CERTIFICATIONS & EXTRACURRICULAR ACTIVITIES8

- Served as Problem Setter at TCET Shastra Club.
- Solved 200+ problems across LeetCode, GeeksforGeeks, and CodeStudio.
- Achieved 5-star rating on HackerRank.
- Achieved 2-star rating (max: 1597) on CodeChef.
